What Are Flowers?

Flowers are the reproductive structures of flowering plants, also known as angiosperms. They are designed to produce seeds that can grow into new plants. Flowers are not just pretty to look at; they are essential for plant reproduction and help produce fruits and vegetables we eat every day.

Parts of a Flower

Understanding the parts of a flower helps us learn how they work. The main parts include:

- **Petals:** The colorful parts that attract pollinators like bees and butterflies.
- **Stamen:** The male part of the flower that produces pollen.
- **Pistil:** The female part that contains the ovary, where seeds develop.
- **Sepals:** Green leaf-like parts that protect the flower before it blooms.
- **Receptacle:** The part of the stem where the flower parts are attached.

Fun Facts About Flowers for Kids

1. Flowers Come in All Shapes and Sizes

Flowers are incredibly diverse! Some are tiny, like the duckweed flower, which is less than a millimeter wide, while others, like the giant Rafflesia, can be over a meter across. Here are some examples:
